About | Responsibilities | Requirements | N

About the role

Umbrella Labs is building internal platform services for payments and reporting. You will join a team of eight engineers working on the job queue, the API layer and the data pipelines.

Responsibilities

- Design and build backend services used by other teams
- Own the job queue: scaling, retries and monitoring
- Review code and write clear design notes
- Work with product on rollout plans
- Join the on-call rotation after onboarding

Requirements

- 3+ years building backend systems
- Strong SQL and API design experience
- Comfortable with Node.js or Java
- Experience with queues or event-driven systems
- Clear written and spoken communication

Nice to have

- Payments or fintech background
- Experience with Postgres tuning

Benefits

- Health cover and annual learning budget
- Flexible working hours
